## 1 About Me

Hello. My name is Alex Hinshaw. I wanted to take this class to learn how to better understand how to render data into a more usable form. I am would like to be able to build models that allow me to be a better day trader (or sports better, I've never bet on sports but it seems like a fun way to make or lose money). I think I want to do my class project over something related to sports analytics. My goal for this class is to become a more proficient coder in R. Last semester was my first go at coding and I sucked, but I feel like I am beginning to get the hang of it.

## 2 Equation

$$a^2 + b^2 = c^2$$
